Use of Satellite information in Flood Risk Management

- Fundamental and advanced technology for observations and analyses
- End-user product generation for flood analyses and risk reduction

Use of Satellite Information in Flood Risk Management

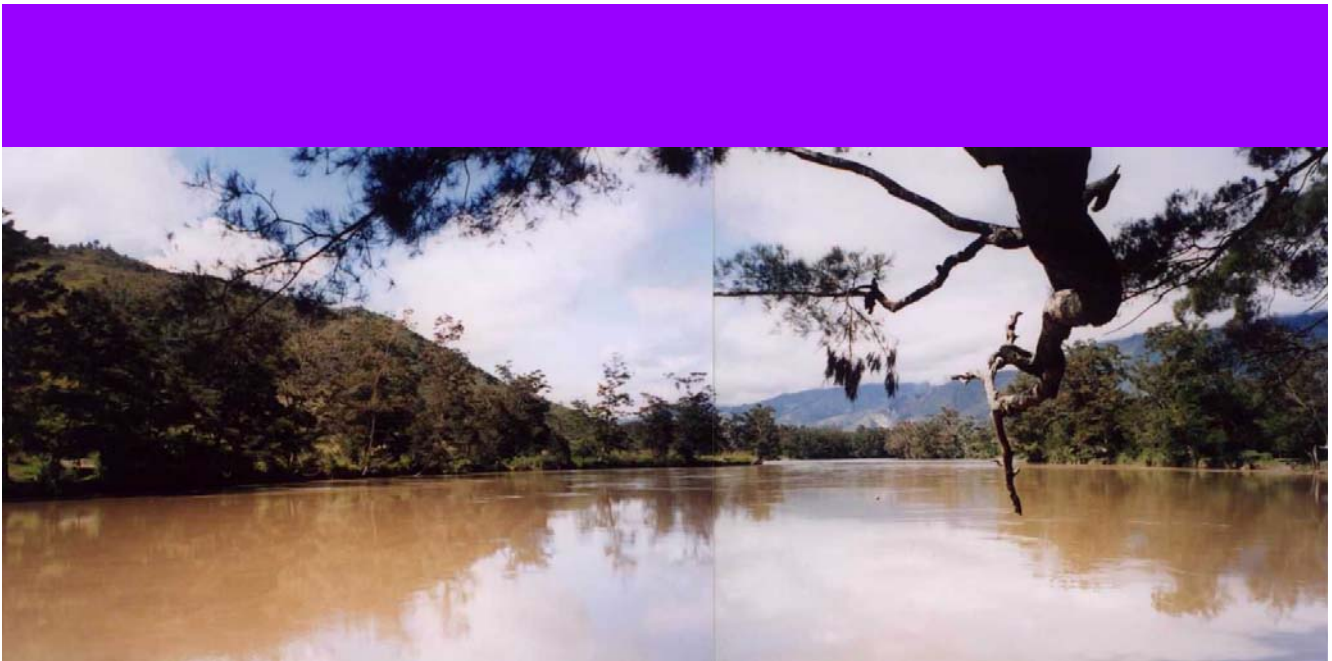

Capacity Building Program Mode

- Short / long term training
 - training programs on the use of tools and data
- Roving seminar
 - real time flood forecasting
 - flood scenario development
 - * inundation for different return period rainfall
 - * flood risk base on hazard and vulnerable
- Case Study Modules

Goals and Objectives

To use advanced earth observations systems, associated data and tools for water cycle research and water resources management under GEOSS framework.

Thank you
for your kind attention
